SUMMARY

Full-stack web developer with 3+ years shipping production applications for a fast paced E-commerce site on the LAPP stack (Linux, Apache, PostgreSQL, PHP), including a customer Rewards Program I built solo, end to end. Grew into a key role managing the AWS infrastructure those applications run on. Equally comfortable in application code and deployment pipelines — and quick to pick up whatever the stack calls for next.

SKILLS

Languages: PHP, JavaScript, TypeScript, Go
Frameworks: Laravel, CodeIgniter, Next.js, Apache
Cloud & DevOps: AWS (CLI), Docker, Kubernetes, Linux, PostgreSQL
Tools: Git, CI/CD

EXPERIENCE

Full-Stack Web Developer — Best Cigar Prices, Drums, PA

March 2023 - July 2026

- **Rewards Program (solo build):** Designed and built the company’s customer Rewards Program end to end on the LAPP stack: the customer-facing front end, customer service and admin tools, cron jobs, and backend logic, for a platform supporting over **200,000** production users
- Moved into a key role of deployment infrastructure — stood up Docker and Kubernetes environments on AWS, cutting release time by up to **35%** on average
- Refactored the company's in-house receiving software, improving page-load time by **209%** and improving total items received by **42%**
- Wrote AWS CLI automation for deployments and backups, saving the team roughly **5 hours** per week

PROJECTS

EasyScores — Sports Score Tracker

easyscores.laravel.cloud

- Designed, built, and deployed solo a mobile-first NBA, NFL, and MLB tracker that leads with the score: live scores, box scores, standings, and a favorite-teams home screen
- Built a provider-agnostic data layer over ESPN's public API with state-based caching, request coalescing, and stale-on-failure fallback, so concurrent viewers share one upstream call; covered by about 170 tests

  Laravel 13, Inertia, React 19, TypeScript, Tailwind CSS, Fortify, PHPStan, Laravel Cloud

Cashtrakd — Continuous Budget App (in progress)

cashtrakd.com

- Building a continuous personal budgeting app on Laravel and Next.js; containerizing with Docker for Kubernetes deployment

  PHP 8.4, Laravel 13, Next.js, PostgreSQL, Docker, Kubernetes

EDUCATION

- **Computer Science Coursework** — Johnson College, Dickson City, PA
- **High School Diploma** — Agora Cyber School, Scranton, PA
- **Full-Stack Web Development, 100Devs** — Jan 2022 - Mar 2023

CERTIFICATIONS

AWS Certified Cloud Practitioner
